Northern Ireland Road Traffic Collision Data

Contents

Introduction

The data is supplied in three files (in fixed field ASCII format and SPSS format).

2015

1   Collision2015.sav – The circumstances of the collisions - details include the collision severity, number of vehicles and casualties involved, time and location, weather and road conditions, and carriageway hazards;

2   Vehicle2015.sav – Vehicles involved in each collision - details include vehicle type, manoeuvre at time of collision, and data about the driver (age, sex).

3   Casualty2015.sav – Casualties resulting from a collision - details include age, sex, injury severity and whether a driver, passenger, pedestrian or cyclist.

The numeric variable "a_ref" gives a unique index number for each collision. Casualties are linked to vehicles by linking "v_id".

Please call Statistics Branch (028 90 650222 ext 24480) if you need any further details or if you find any problems with the data.
